

CASE100 - Project Analysis

P1 – Architectural Drawings Analysis

Vocabulary Extraction

- Corridor
- Residential unit
- Balcony
- Courtyard
- Stairwell
- Lift core
- Lobby
- Dining hall
- Lounge
- Outdoor terrace
- Landscaped garden
- Activity room
- Consultation room
- Storage
- Utility / Service core

Quantity Estimation

- Stairwells × approx. 2 per floor
- Lift cores × approx. 2 per floor
- Residential units × approx. 8–10 per floor
- Balconies × approx. 8–10 per floor
- Courtyard × 1 (only on Ground Level)
- Dining / Lounge space × 1 per floor
- Storage / Utility × 2–3 per floor

Spatial Relationship Descriptions

- Residential units are arranged in double-loaded corridors, with circulation cores (stairs/lifts) at each end.
- Balconies are attached to most units and open toward landscaped zones.
- Lounges and dining spaces are adjacent to circulation nodes for ease of access and social connectivity.
- Courtyard acts as a central open node with programs layered around it.

Overall Spatial Impression

The architectural layout demonstrates an efficient, modular arrangement with integrated communal spaces that

P2 – Photographs / Renders Analysis

Design Vocabulary Extraction

- Overhanging roof
- Louvered screen
- Recessed balcony
- Perforated metal screen
- Glazing / Curtain wall
- Brick cladding
- Timber soffits
- Vertical fins
- Landscape buffer
- Shadow boxes

Atmospheric Description

The atmosphere evokes calm, residential comfort through warm materials and filtered natural light.

Spatial Composition / Hierarchy

Composition follows a rhythmic solid-void alternation (glazing vs. wall mass).

Design Intent Reading

The design promotes a dignified aging experience by combining privacy, accessibility, and social integration.

Contextual Relationship

The architecture integrates into its suburban context via familiar scale and materials.

P3 – Detail / Diagrammatic Reading

Diagram Analysis

- Strategy diagrams highlight clustering of shared programs near core vertical access.
- Ventilation and daylight sketches depict internal corridors ventilated via courtyards and openings.
- Material diagrams delineate lower-floor heaviness (brick) with lightness at upper levels (screens and openings).
- Sections reveal stepped massing and terrace access integrated into the residential units.

Level 1

Vocabulary Extraction

- Lobby
- Courtyard
- Consultation rooms
- Dining hall
- Lounge
- Garden
- Activity room
- Kitchen
- Storage
- Stairwell
- Lift

Quantity Estimation

- Lobby × 1
- Courtyard × 1
- Consultation room × 2
- Dining hall × 1
- Lounge × 1
- Stairwell × 2
- Lift core × 2
- Storage × 2

Spatial Relationship Descriptions

- Courtyard is central and surrounded by consultation, lounge, and activity rooms.
- Entry lobby links directly to the main communal and medical functions.
- Circulation cores are placed symmetrically at each end of the central corridor.

Overall Spatial Impression

Level 1 is programmed as the primary communal and medical access floor, activating the ground plane with greenery and outdoor spaces.

Level 2

Vocabulary Extraction

- Residential units
- Balcony
- Lounge
- Storage
- Stairwell
- Lift
- Corridor

Quantity Estimation

- Residential units × approx. 9
- Balconies × approx. 9
- Lounge × 1
- Storage × 2
- Stairwell × 2
- Lift core × 2

Spatial Relationship Descriptions

- Apartments line both sides of a central corridor, accessed from stair/lift cores.
- Lounge is strategically placed near the vertical core as a social anchor.
- Balconies project outward to maximize daylight and neighborhood connection.

Overall Spatial Impression

Level 2 represents the primary residential layer with embedded social support via shared lounge and balcony spaces.

Level 3

Vocabulary Extraction

- Residential units
- Balcony
- Roof terrace
- Utility room
- Stairwell
- Lift
- Corridor

Quantity Estimation

- Residential units × approx. 8
- Balconies × approx. 8
- Roof terrace × 1
- Utility / Equipment rooms × 2
- Stairwell × 2
- Lift core × 2

Spatial Relationship Descriptions

- Residential units follow the same double-loaded corridor logic as Level 2.
- A partial roof terrace is placed at one end near a communal node.
- Utility rooms are located near circulation cores to consolidate services.

Overall Spatial Impression

Level 3 continues residential programming with added amenity value via rooftop outdoor access and service zones.
