

CASE14 - Architectural Floor Analysis

Level 1 (Ground Floor)

Vocabulary Extraction

- Reception hall
- Multipurpose activity rooms
- Dining hall
- Kitchen
- Medical care area
- Offices
- Storage rooms
- Technical equipment rooms
- Outdoor gardens
- Terraces

Quantity Estimation

- Reception hall × 1
- Multipurpose activity rooms × approximately 2
- Dining hall × 1
- Kitchen × 1
- Medical care area × 1
- Offices × approximately 3
- Storage rooms × approximately 2
- Technical equipment rooms × approximately 2
- Outdoor garden × 1
- Terraces × 2

Spatial Relationship Descriptions

CASE14 - Architectural Floor Analysis

- The reception hall is directly connected to the main entrance and adjacent to offices and multipurpose spaces, facilitating visitor access and staff workflow.
- The dining hall is connected to the kitchen and opens to the terraces, offering flexible indoor-outdoor use.
- The medical area is positioned near the main access point to enable rapid response.
- Outdoor gardens are integrated with the multipurpose spaces, encouraging resident activity and interaction.

Overall Spatial Impression

The ground floor is organized for high accessibility and functionality, combining administrative, medical, and communal dining programs in adjacency to outdoor areas.

Level 2 (First Floor)

Vocabulary Extraction

- Residential units
- Shared living rooms
- Nursing stations
- Bathrooms
- Storage rooms
- Terraces

Quantity Estimation

- Residential units × approximately 45
- Shared living rooms × approximately 2
- Nursing stations × approximately 2
- Bathrooms × approximately 10
- Storage rooms × approximately 2
- Terraces × 2

CASE14 - Architectural Floor Analysis

Spatial Relationship Descriptions

- Residential units are aligned along double-loaded corridors.
- Shared living rooms are positioned at corridor ends, creating natural social hubs.
- Nursing stations are centrally placed for efficient surveillance and care access.
- Bathrooms are dispersed across the corridor to support accessibility.
- Terraces connect to shared living rooms, extending the communal zone outdoors.

Overall Spatial Impression

The first floor balances private living quarters with strategic communal areas and care infrastructure to foster a safe and interactive residential environment.

Level 3 (Second Floor)

Vocabulary Extraction

- Residential units
- Shared living rooms
- Nursing stations
- Bathrooms
- Storage rooms
- Terraces

Quantity Estimation

- Residential units × approximately 45
- Shared living rooms × approximately 2
- Nursing stations × approximately 2
- Bathrooms × approximately 10
- Storage rooms × approximately 2
- Terraces × 2

CASE14 - Architectural Floor Analysis

Spatial Relationship Descriptions

- Mirroring the floor below, residential units are arrayed along central corridors.
- Communal spaces and terraces are placed to foster social cohesion and access to fresh air.
- Nursing stations are centrally integrated for care efficiency.
- Bathroom placement supports user proximity and distribution efficiency.

Overall Spatial Impression

The second floor maintains the design consistency of the first, ensuring residential comfort, care support, and opportunities for community engagement through shared spatial nodes.
