

Building Level Summary

Level 1

1) Vocabulary Extraction

- Corridor
- Living units
- Stairwell
- Elevator
- Reception area
- Multipurpose room
- Dining area
- Kitchen
- Storage room
- Laundry room
- Restroom

2) Quantity Estimation

- Corridor × continuous
- Living units × approximately 10-12
- Stairwell × 2
- Elevator × 1
- Reception area × 1
- Multipurpose room × 1
- Dining area × 1
- Kitchen × 1
- Storage room × 2-3

- Laundry room × 1

- Restroom × 2-3

3) Spatial Relationship Descriptions

- Living units are organized along both sides of a central corridor.
- Public programs like dining and multipurpose rooms are grouped at one end to encourage interaction.
- Service spaces (kitchen, storage, laundry) are adjacent to communal areas for efficient support.
- Vertical circulation (stairs, elevator) is centrally placed for easy access.

4) Overall Spatial Impression

The first floor is logically divided between private living areas and communal zones, enabling both privacy and social activity in a balanced layout.

Level 2

1) Vocabulary Extraction

Not directly available via drawings, inferred via photos:

- Living units
- Corridor
- Balcony or loggia
- Vertical circulation elements

2) Quantity Estimation

- Living units × approximately 10-12
- Stairwell × 2
- Elevator × 1
- Balcony/loggia × 4-6 (visibly distributed)

3) Spatial Relationship Descriptions

- Second floor follows a similar typological distribution as the first: units flank corridors.
- Balconies/loggias extend units toward the facade, offering semi-private outdoor areas.
- Stairwells and elevator align with lower floors.

4) Overall Spatial Impression

Upper levels repeat the spatial logic of the ground floor, with added access to outdoor extensions (balconies), contributing to improved livability.

Level 3

1) Vocabulary Extraction

Inferred based on photos and spatial continuity:

- Living units
- Corridor
- Roof terrace or recessed balconies
- Vertical circulation (stairs/elevator)

2) Quantity Estimation

- Living units × approximately 8-10
- Stairwell × 2
- Elevator × 1
- Roof terraces/loggias × 2-3

3) Spatial Relationship Descriptions

- Top floor seems more articulated, possibly with fewer units and larger balconies or roof terraces.

- Circulation continues through the central vertical core.
- Façade modulations suggest rhythmic voids for outdoor spaces.

4) Overall Spatial Impression

The third level caps the building with slightly more open and relaxed spatial conditions, providing broader views and private outdoor experiences, completing the vertical spatial rhythm.
