

Project Layered Output

LEVELS OVERVIEW

Total Levels: 1

Structure Type: Single-storey Renovation

Site Area: Approx. 80 m²

Project Context: 1980s red-brick community residential block in Shanghai, China

Design Purpose: Elderly-friendly retrofit with spatial accessibility and light/ventilation improvement

Level 1

1. Vocabulary Extraction

- Entrance ramp (with handrails)
- Multipurpose corridor (with storage cabinets and sliding dining table)
- Living room
- Master bedroom
- Guest bedroom
- Kitchen
- Accessible bathroom
- Laundry/storage room
- Shared courtyard
- Skylight (motorized)
- PVC pitched roof
- Rooftop terrace

2. Quantity Estimation

- Entrance ramp × 1
- Multipurpose corridor × 1
- Living room × 1
- Master bedroom × 1
- Guest bedroom × 1
- Kitchen × 1
- Accessible bathroom × 1
- Laundry/storage room × 1
- Shared courtyard × 1 (shared with neighbors)
- Skylight × 1
- PVC pitched roofs × 3
- Rooftop terrace × 1

3. Spatial Relationship Descriptions

- The entrance features a ramp with handrails, allowing elderly access into the home.
- A central multipurpose corridor organizes the spatial layout, connecting all primary rooms: the living area, bedrooms, kitchen, and bathroom.
- Storage cabinets and a retractable dining table are integrated into the corridor, supporting daily functionality and compactness.
- The kitchen and laundry/storage areas are positioned at the end of the circulation axis.
- The skylight, positioned above the dining area, enhances natural lighting and vertical openness.
- Three angled PVC roof segments adjust orientation to optimize cross-ventilation based on surrounding buildings and trees.
- The existing rooftop terrace provides visual and spatial continuity upward, retained from the original construction.

4. Overall Spatial Impression

The single-storey layout prioritizes accessibility and functional clarity. A centralized corridor governs circulation while integrating storage and flexible dining components. The retrofit introduces vertical spatial relief through skylights and pitched roofing, improving environmental comfort while preserving historical materiality (red-brick surfaces) and fostering neighborhood interaction through a shared courtyard.
