

CASE23 - Elderly Healthcare Building by Pinearq

Level 1

1. Vocabulary Extraction

- Ward units
- Central support zone
- Administration area
- Therapy unit
- Interior patios
- Skylights
- Corridors

2. Quantity Estimation

- Ward units × 3
- Central support zone × 1
- Administration area × 1
- Therapy unit × 1
- Interior patios × multiple
- Skylights × multiple
- Corridors × several

3. Spatial Relationship Descriptions

- All ward units are distributed around a central support core.
- Administration and therapy units are located in close proximity to the residential units for staff and resident accessibility.
- Corridors are predominantly horizontal, linking all service zones through interior patios that provide natural lighting.

4. Overall Spatial Impression

The ground floor is organized around a central functional core, promoting orientation through natural light, visibility, and clear circulation paths that support daily life and care activities.

Level -1

1. Vocabulary Extraction

- General service areas

2. Quantity Estimation

- General service areas × several (exact number unspecified)

3. Spatial Relationship Descriptions

- This level is primarily dedicated to building support functions, located below the main residential and care program spaces.

4. Overall Spatial Impression

The basement level supports logistics and infrastructure, ensuring unobtrusive service operations to sustain the residential and therapeutic uses above.
