

CASE28 - Day Care and Elderly Residential Centre

LEVEL 1

1. Vocabulary Extraction

- Entrance hall
- Social spaces
- Multipurpose activity areas
- Dining area
- Kitchen
- Restrooms
- Storage rooms
- Outdoor garden
- Service areas
- Vertical circulation core

2. Quantity Estimation

- Entrance hall × 1
- Social spaces × approximately 2-3
- Multipurpose areas × approximately 2
- Dining area × 1
- Kitchen × 1
- Restrooms × approximately 2-3
- Storage rooms × approximately 2
- Outdoor garden × 1
- Vertical circulation core × 1

3. Spatial Relationship Descriptions

- The entrance hall connects directly to major social and activity areas.
- The dining area and kitchen are adjacent, forming a functional food service cluster.
- Multipurpose and social spaces are arranged contiguously to enhance communal use.
- Outdoor gardens are spatially integrated with indoor areas to allow fluid transitions and daylight penetration.
- The vertical core is centrally located for accessibility.

4. Overall Spatial Impression

The ground floor emphasizes communal and support functions, articulated through open spatial

organization and clear circulation paths, fostering interaction and daylight access.

LEVEL 2

1. Vocabulary Extraction

- Residential units
- Corridors
- Shared lounges
- Restrooms
- Vertical circulation core

2. Quantity Estimation

- Residential units × approximately 15
- Shared lounges × approximately 1-2
- Restrooms × approximately 2
- Vertical circulation core × 1

3. Spatial Relationship Descriptions

- Units are flanked along corridors creating double-loaded layouts.
- Shared lounges occur near corridor intersections to serve as social nodes.
- Restrooms are distributed for proximity to multiple units.
- The vertical core serves as a central spine linking all levels.

4. Overall Spatial Impression

This floor supports semi-private living through efficient unit clustering around social cores, encouraging passive interaction among residents.

LEVEL 3

1. Vocabulary Extraction

- Residential units
- Corridors
- Shared lounges
- Restrooms
- Vertical circulation core

2. Quantity Estimation

- Residential units × approximately 15
- Shared lounges × approximately 1-2
- Restrooms × approximately 2

- Vertical circulation core × 1

3. Spatial Relationship Descriptions

- Units line both sides of corridors in a repeated configuration.
- Lounges provide visual and social relief along linear paths.
- Vertical core enables easy vertical transitions between levels.

4. Overall Spatial Impression

Repetition of unit organization strengthens identity and predictability while supporting spatial familiarity for elderly residents.

LEVEL 4

1. Vocabulary Extraction

- Residential units
- Corridors
- Shared lounges
- Restrooms
- Vertical circulation core

2. Quantity Estimation

- Residential units × approximately 15
- Shared lounges × approximately 1-2
- Restrooms × approximately 2
- Vertical circulation core × 1

3. Spatial Relationship Descriptions

- The floor mirrors earlier layouts, optimizing efficiency.
- Strategic lounge placement enhances sense of orientation and rest.
- Proximity of restrooms to units maintains usability and comfort.

4. Overall Spatial Impression

The spatial layout consolidates a routine-oriented lifestyle with shared zones subtly embedded within repetitive housing fabric.

LEVEL 5

1. Vocabulary Extraction

- Residential units
- Corridors
- Shared lounges

- Restrooms
- Vertical circulation core

2. Quantity Estimation

- Residential units × approximately 15
- Shared lounges × approximately 1-2
- Restrooms × approximately 2
- Vertical circulation core × 1

3. Spatial Relationship Descriptions

- Similar to lower floors, maintaining modularity.
- Top floor benefits from increased daylight and views.
- Social zones act as buffers between private units and circulation.

4. Overall Spatial Impression

With enhanced exposure to natural light, this floor elevates the living quality while retaining the building's standardized layout principles.
