

CASE29 Spatial Analysis Output (Elderly Residential Building / Atelier Lopes da Costa)

Level -2

Vocabulary Extraction

Suites

Individual Storage Rooms

Technical Areas

Backing Facilities

Quantity Estimation

Suites 8

Individual Storage Rooms multiple

Technical Areas multiple

Backing Facilities multiple

Spatial Relationship Descriptions

Suites and storage rooms are organized along the southern bar, while technical and support areas are interspersed across the floor to optimize service distribution.

Overall Spatial Impression

This level provides an extension of residential and technical zones with an emphasis on operational support and privacy.

Level -1

Vocabulary Extraction

Bedrooms

Suites (including bedrooms and living areas)

Garage

Individual Storage Rooms

Technical Areas

Living Areas

Assisted Bathrooms

Laundry

Quantity Estimation

Bedrooms 10

Suites 8

Garage 1 (approx. 20 cars)

Individual Storage Rooms multiple

Technical Areas multiple

Living Areas multiple

Assisted Bathrooms multiple

Laundry 1

Spatial Relationship Descriptions

Living units are placed along the terrain to capture light and views, while garage and technical areas are separated within the western bar to reduce noise and interference.

Overall Spatial Impression

This basement level integrates compact living units with logistical and service spaces, enabling efficient vertical and horizontal transitions.

Level 1 (Ground Floor / Main Entrance Level)

Vocabulary Extraction

Reception

Activity Areas

Living and Socializing Areas

Dining Areas

Support Services

Health Area (doctors offices, nurse room, physiotherapy, gym, pool, locker rooms, restrooms)

Quantity Estimation

Reception 1

Activity Areas several

Living and Socializing Areas several

Dining Areas several

Support Services several

Health Area 1 (composed of multiple sub-functions)

Spatial Relationship Descriptions

Public zones cluster around the reception, leading into activity and dining areas, while the health program is articulated in the western block and linked via circulation spines.

Overall Spatial Impression

This floor acts as the central community interface, interweaving hospitality, healthcare, and sociability across a fluid and accessible plan.

Level 2

Vocabulary Extraction

Bedrooms

Hospital Support Areas

Quantity Estimation

Bedrooms multiple

Hospital Support Areas multiple

Spatial Relationship Descriptions

Bedrooms are adjacently arranged with hospital support rooms, facilitating ease of monitoring and service access.

Overall Spatial Impression

The first elevated level prioritizes assisted living arrangements with strong medical proximity to ensure resident well-being.

Level 3 (Partial Upper Floor in South Bar)

Vocabulary Extraction

Bedrooms

Quantity Estimation

Bedrooms a few (only in part of the building)

Spatial Relationship Descriptions

Upper-floor bedrooms continue the layout logic of lower residential levels and are accessible through vertical circulation cores.

Overall Spatial Impression

This partial floor supplements residential capacity with continuity in vertical planning while utilizing rooftop potential.
