

CASE34 - Julia von Bodelschwingh Haus

Building Spatial Structure and Analysis

Building Levels and Spatial Breakdown

Project Total Levels: 6

- Basement Level (B1)
- Level 1 (Ground Floor)
- Level 2
- Level 3
- Level 4
- Level 5 (Top Floor)

Level-by-Level Spatial Analysis

Level B1 - Basement

(1) Vocabulary Extraction

- Service rooms
- Infrastructure spaces

(2) Quantity Estimation

- Service rooms × several
- Infrastructure rooms × multiple

(3) Spatial Relationship Descriptions

- The basement is embedded into the sloped terrain and houses most of the building's technical and utility infrastructure, freeing the upper floors for residential and programmatic uses.

(4) Overall Spatial Impression

- The basement efficiently supports building operations by segregating technical functions underground, optimizing above-ground spatial usage.

Level 1 - Ground Floor

(1) Vocabulary Extraction

CASE34 - Julia von Bodelschwingh Haus

- Entrance foyer
- Administrative offices
- Therapeutic bath
- Hairdresser
- Therapy rooms

(2) Quantity Estimation

- Entrance foyer × 1
- Administrative offices × several
- Therapeutic bath × 1
- Hairdresser × 1
- Therapy rooms × multiple

(3) Spatial Relationship Descriptions

- The entrance foyer is a double-height space functioning as a communal gathering area. Administrative rooms are placed along its edges with internal views, while care-related services are clustered for convenient access.

(4) Overall Spatial Impression

- The ground floor is designed as a welcoming, communal, and service-rich platform promoting social interaction and accessible care functions.

Level 2

(1) Vocabulary Extraction

- Barrier-free apartments
- Corridors
- Continuous balconies
- Glazed facades

(2) Quantity Estimation

- Apartments × approximately 4-5
- Corridors × 1
- Balconies × 1 strip across the facade

(3) Spatial Relationship Descriptions

- Apartments are arranged linearly along a corridor, with each unit accessing daylight and exterior views via

CASE34 - Julia von Bodelschwingh Haus

continuous balconies and full-height glazing.

(4) Overall Spatial Impression

- Level 2 offers high-comfort, accessible residential spaces oriented to light, landscape, and movement continuity.

Level 3

(1) Vocabulary Extraction

- Barrier-free apartments
- Corridors
- Continuous balconies
- Glazed facades

(2) Quantity Estimation

- Apartments × approximately 4-5
- Corridors × 1
- Balconies × 1

(3) Spatial Relationship Descriptions

- This floor replicates the layout logic of Level 2, offering consistent spatial rhythm and residential quality across floors.

(4) Overall Spatial Impression

- Continuity in planning enhances the vertical coherence and usability of the residential floors.

Level 4

(1) Vocabulary Extraction

- Barrier-free apartments
- Corridors
- Continuous balconies
- Glazed facades

(2) Quantity Estimation

- Apartments × approximately 4-5
- Corridors × 1
- Balconies × 1

CASE34 - Julia von Bodelschwingh Haus

(3) Spatial Relationship Descriptions

- Apartments align along a single-loaded corridor, with outward-facing balconies and expansive windows, maintaining accessibility and visual openness.

(4) Overall Spatial Impression

- This level continues the residential typology strategy, fostering a stable and inclusive living environment.

Level 5 - Top Floor

(1) Vocabulary Extraction

- Communal space
- Roof terrace

(2) Quantity Estimation

- Communal space × 1
- Roof terrace × 1

(3) Spatial Relationship Descriptions

- Communal indoor areas seamlessly connect to an outdoor terrace, promoting socialization with panoramic views.

(4) Overall Spatial Impression

- The top floor is designed for communal bonding and relaxation, emphasizing openness, view, and collective use.
