

CASE 35 - Eltheto Housing and Healthcare Complex

Building Levels

General Floor Count Justification:

By examining the architectural drawings and images on the ArchDaily webpage, the project comprises three levels for the residential blocks and two levels for the healthcare center. This conclusion is supported by floorplans and section diagrams clearly showing level indicators.

Level 1 (Residential Block)

Vocabulary Extraction

- Entrance hall
- Residential units
- Corridor
- Stairwell
- Courtyard

Quantity Estimation

- Residential units × approx. 4-6
- Stairwells × 1-2

Spatial Relationship Descriptions

- Entrance halls lead into shared corridors connecting the units.
- Stairwells are situated at strategic corners to serve multiple units.
- Residential units are distributed around a shared internal courtyard.

Overall Spatial Impression

The first floor serves as a threshold space where community life interfaces with privacy, enabling flow and access while encouraging interaction.

Level 2 (Residential Block)

Vocabulary Extraction

- Residential units
- Corridor
- Stairwell
- Balcony

Quantity Estimation

- Residential units × approx. 4-6
- Balconies × 1 per unit

Spatial Relationship Descriptions

- Corridors continue the same organizational logic from Level 1, with units lining either side.
- Each unit opens out to a balcony facing the central courtyard.

Overall Spatial Impression

The second floor maintains continuity in layout but begins to shift emphasis toward private retreat through outdoor balconies.

Level 3 (Residential Block)

Vocabulary Extraction

- Residential units
- Corridor
- Stairwell
- Balcony

Quantity Estimation

- Residential units × approx. 4-6
- Balconies × 1 per unit

Spatial Relationship Descriptions

- This level mirrors the second in configuration.
- Balconies offer more elevated views and privacy.

Overall Spatial Impression

The third level offers increased privacy and vertical separation, reinforcing a sense of retreat while still maintaining visual access to the courtyard.

Level 1 (Healthcare Center)

Vocabulary Extraction

- Reception area
- Consultation rooms
- Pharmacy
- Waiting area

Quantity Estimation

- Consultation rooms × approx. 3-5
- Waiting area × 1

Spatial Relationship Descriptions

- Reception sits adjacent to the entrance and opens into the waiting area.
- Consultation rooms cluster around circulation paths for patient access.
- Pharmacy is placed near the exit for logistical efficiency.

Overall Spatial Impression

This floor supports a clear functional circulation loop aimed at user comfort, service efficiency, and minimal

confusion.

Level 2 (Healthcare Center)

Vocabulary Extraction

- Offices
- Meeting rooms
- Staff lounge

Quantity Estimation

- Offices × approx. 4-6
- Meeting rooms × 1-2

Spatial Relationship Descriptions

- Offices are grouped to one side for administrative coherence.
- Lounge and meeting rooms are set apart to offer quiet and rest.

Overall Spatial Impression

The second level is a support space for healthcare operations, offering a separation from patient zones and catering to staff well-being and workflow.
