

CASE4 - Architectural Analysis Output

P1 - Architectural Drawings

1. Vocabulary Extraction

- Internal courtyards
- Shared access corridor/core
- Daycare center
- Elderly home
- Main entrance
- Landscape viewpoints
- Public green area
- Retaining wall base

2. Quantity Estimation

- Internal courtyards × approximately 2
- Main entrance × 1
- Functional zones (Daycare Center & Elderly Home) × 2

3. Spatial Relationship Descriptions

- The building is organized into two main volumes: a daycare center and an elderly home, both accessed through a central shared core.
- Each functional volume opens onto its own private courtyard, enhancing natural light and privacy.
- The structure integrates with three surrounding streets and a green public plaza, maximizing accessibility and urban interaction.
- The existing retaining wall serves as the architectural base, reinforcing site memory and topographical integration.

4. Overall Spatial Impression

The architectural design utilizes functional zoning and central circulation to enable independence and connection, fostering both privacy and community among elderly users.

Level 1

1. Vocabulary Extraction

- Internal courtyards
- Shared access corridor/core

- Daycare center
- Elderly home
- Main entrance
- Landscape viewpoints
- Public green area
- Retaining wall base

2. Quantity Estimation

- Internal courtyards × approximately 2
- Main entrance × 1
- Functional zones (Daycare Center & Elderly Home) × 2

3. Spatial Relationship Descriptions

- The central access core connects two separated program volumes (daycare and elderly home).
- Each program volume is linked to its dedicated courtyard, generating distinct zones for passive and active aging.
- Building opens to multiple street edges and a green plaza, inviting community interaction.

4. Overall Spatial Impression

The single-level structure emphasizes ease of access and visual connectivity, with careful attention to landscape integration and program autonomy.
