

Tiger Island Senior Apartments - Project Analysis (CASE40)

Building Overview

Total Floors: 2

P1 - Architectural Drawings Analysis

Vocabulary Extraction

- Residential units
- Exterior walkways
- Central courtyard
- Sawtooth facades
- Entry porch
- Rainwater collection system

Quantity Estimation

- Residential units: Approximately 10-12 per floor
- Exterior walkways: 1 per floor
- Sawtooth facades: Approximately 10-12 per floor
- Central courtyard: 1, shared across both floors
- Rainwater collection system: 1, located at the main entry

Spatial Relationship Descriptions

- Residential units are arranged along exterior walkways, facing the central courtyard, promoting community interaction.
- Sawtooth facades provide semi-private entry niches, enhancing personal space and aiding wayfinding.

- The central courtyard serves as a communal space, accessible from both floors, encouraging social engagement.
- The rainwater collection system is integrated at the main entry, directing water to native plantings, supporting sustainable landscaping.

Overall Spatial Impression

The design emphasizes community living through a central courtyard, with residential units oriented to foster interaction. The incorporation of sawtooth facades and exterior walkways enhances both privacy and connectivity, while sustainable features like the rainwater collection system reflect environmental consciousness.

P2 - Photographs or Renders Analysis

1. Design Vocabulary Extraction

- Fiber cement panels
- Sawtooth facades
- Exterior walkways
- Central courtyard
- Rainwater conductor head
