

Project Preprocess Output - Structured by Level

Level 1 (Ground Floor)

1 Vocabulary Extraction

- Assembly hall
- Common room
- Foyer
- Overhanging roof
- Skylight
- Floor-to-ceiling glazing
- Concrete coffered ceiling
- Outdoor square

2 Quantity Estimation

- Assembly hall × 1
- Common room × 1
- Foyer × 1
- Skylights × approximately 3-4
- Overhanging roof × 1
- Outdoor square × 1

3 Spatial Relationship Descriptions

- The assembly hall is located beneath the overhanging roof and directly connected to the outdoor square, creating a semi-exterior transition space.
- The common room is adjacent to the assembly hall and connected to the existing care facility via the foyer.

- Floor-to-ceiling glazing blurs the boundary between interior and exterior, promoting visual transparency.
- Skylights are positioned above the hall to draw natural light into the central space.

4 Overall Spatial Impression

The ground level is designed as a communal hub, integrating indoor and outdoor areas through expansive glazing and open circulation, supporting interaction and inclusiveness.

Basement Level (Underground Parking)

1 Vocabulary Extraction

- Underground parking
- Access ramp
- Structural columns

2 Quantity Estimation

- Parking spaces × approximately 10-15
- Access ramp × 1
- Structural columns × multiple (grid support layout)

3 Spatial Relationship Descriptions

- The underground parking lies directly beneath the assembly space, accessed via a sloped driveway.
- Structural columns are systematically distributed to support the overhead concrete coffered slab.

4 Overall Spatial Impression

The basement level is a functional, space-saving infrastructure layer that enhances above-ground spatial quality by relocating vehicular functions below grade.

Photographic/Renders Analysis (P2)

1. Design Vocabulary Extraction

- Exposed concrete
- Coffered ceiling
- Floor-to-ceiling glazing
- Overhanging roof
- Skylight
- Outdoor square

2. Atmospheric Description

The images depict a calm, dignified interior atmosphere, emphasizing tactile materiality through exposed concrete and geometric ceiling articulation. Natural light enriches spatial quality via skylights and large glazed surfaces.

3. Spatial Composition or Hierarchy

The spatial hierarchy centers around the assembly hall, framed by a series of connected interior and exterior zones. The rhythm of ceiling coffers and glazing frames provides a sense of modular order and visual continuity.

4. Design Intent Reading

The design emphasizes openness, light, and community. The integration of public gathering spaces under a protective canopy reflects a strong commitment to social engagement and architectural clarity.

5. Contextual Relationship

The new structure integrates seamlessly with the existing retirement complex, enhancing access

and continuity through the shared courtyard and landscape, and forming a cohesive spatial narrative.

Detail & Diagram Reading (P3)

- Structural strategy: The coffered slab acts as both structure and ceiling finish, expressing tectonic clarity.
- Daylighting: Skylights and large-format glazing work in tandem to provide abundant daylight and frame views of the garden.
- Spatial integration: The transition from indoor to outdoor is softened by the use of overhanging eaves and consistent flooring materials.
