

CASE 5 - Belleville Sara Weill-Raynal Nursing Home
Level Analysis (6 Levels)

Level 1

(1) Vocabulary Extraction

- Entrance hall
- Dining room
- Common areas
- Garden
- Garden paths
- Benches
- Stairwells
- Elevators

(2) Quantity Estimation

- Entrance hall $\times 1$
- Dining room $\times 1$
- Common area $\times 1$
- Garden $\times 1$
- Stairwells $\times$ approximately 2
- Elevators $\times 1-2$

(3) Spatial Relationship Descriptions

- The entrance hall connects directly to the dining and common areas, creating an open public zone.
- The garden is located at the rear, accessible via garden paths from interior communal spaces.
- Stairwells and elevators are centrally positioned for efficient vertical access.

(4) Overall Spatial Impression

The ground floor serves as the social and community core of the building, where circulation flows into shared spaces and opens to a therapeutic garden environment.

Level 2

(1) Vocabulary Extraction

- Single rooms
- En-suite bathrooms
- Corridors
- Stairwells
- Elevators

(2) Quantity Estimation

- Single rooms $\times$ approximately 18
- Stairwells $\times$ approximately 2
- Elevators $\times 1-2$

(3) Spatial Relationship Descriptions

- Rooms are organized linearly on both sides of a corridor spine.
- Circulation elements (stairs/elevators) are placed at the building's core.
- The layout is optimized for accessibility and caregiving logistics.

(4) Overall Spatial Impression

The second floor is a typical residential level, balancing privacy with accessibility through clear linear circulation.

Level 3

(1) Vocabulary Extraction

- Single rooms
- En-suite bathrooms
- Corridors
- Stairwells
- Elevators

(2) Quantity Estimation

- Single rooms × approximately 18
- Stairwells × approximately 2
- Elevators × 1-2

(3) Spatial Relationship Descriptions

- Identical organizational logic as Level 2: rooms flanking a central corridor.
- Core service shafts and vertical circulation elements remain consistent.

(4) Overall Spatial Impression

A repeat of the efficient residential floor layout, prioritizing repetition and caregiving ease.

Level 4

(1) Vocabulary Extraction

- Single rooms
- En-suite bathrooms
- Corridors
- Stairwells
- Elevators

(2) Quantity Estimation

- Single rooms × approximately 18
- Stairwells × approximately 2
- Elevators × 1-2

(3) Spatial Relationship Descriptions

- The layout mirrors Levels 2 and 3 with similar spatial logics and relationships.
- Supports streamlined movement for staff and residents.

(4) Overall Spatial Impression

The final aligned level before the setback floors, maintaining the consistent modular spatial organization.

Level 5

(1) Vocabulary Extraction

- Single rooms
- En-suite bathrooms
- Corridors
- Stairwells
- Elevators
- Setback terrace or buffer space

(2) Quantity Estimation

- Single rooms × approximately 10-12 (reduced due to building setback)
- Stairwells × approximately 2
- Elevators × 1-2
- Terrace × 1

(3) Spatial Relationship Descriptions

- This floor recedes from the street edge, allowing for outdoor buffer spaces.
- Fewer rooms create a more intimate, possibly premium residential environment.

(4) Overall Spatial Impression

A transitional zone toward the uppermost level, marked by reduced density and increased openness via setbacks.

Level 6

(1) Vocabulary Extraction

- Single rooms
- En-suite bathrooms
- Corridors
- Stairwells
- Elevators
- Roof parapet / edge

(2) Quantity Estimation

- Single rooms × approximately 8-10
- Stairwells × 2
- Elevators × 1-2

(3) Spatial Relationship Descriptions

- Like Level 5, this floor is reduced in area, likely providing premium or specialty units.
- Surrounded by roof parapets and possibly views or terraces.

(4) Overall Spatial Impression

The sixth level caps the vertical volume, reflecting privacy and exclusivity through reduced room count and recessed positioning.
