

Level 1

1. Vocabulary Extraction

- Entrance hall
- Elevators
- Stairwells
- Staff service rooms

2. Quantity Estimation

- Elevators × approximately 2
- Stairwells × approximately 2
- Staff service rooms × approximately 2

3. Spatial Relationship Descriptions

The main entrance opens into a reception hall which connects vertically to upper public and residential floors. Vertical circulation cores (elevators and stairwells) are positioned centrally, while staff service rooms are distributed near operational zones for logistical convenience.

4. Overall Spatial Impression

The ground level serves as a functional threshold, organizing arrival, orientation, and vertical transition efficiently for both users and staff.

Level 2

1. Vocabulary Extraction

- Physiotherapy room
- Ergotherapy room

- Dining room
- Living room
- Bar
- Glass façade
- Porch

2. Quantity Estimation

- Physiotherapy room × 1
- Ergotherapy room × 1
- Dining room × 1
- Living room × 1
- Bar × 1

3. Spatial Relationship Descriptions

Programmatic areas are grouped for public and therapeutic use, centered around a communal node. Visual permeability to the external green area is achieved via a glazed façade. Porches offer semi-open transitional space, enhancing indoor-outdoor continuity.

4. Overall Spatial Impression

This level emphasizes social interaction, therapeutic support, and visual connection to nature, creating a vibrant and inclusive community layer.

Levels 3-5 (Standard Floors)

1. Vocabulary Extraction

- Single rooms
- Bathrooms
- Living rooms

- Dining rooms
- Service rooms
- Medical facilities

2. Quantity Estimation

- Single rooms × approximately 25 per floor
- Bathrooms × approximately 25 per floor
- Living room × 1 per floor
- Dining room × 1 per floor
- Service rooms × approximately 2 per floor
- Medical facilities × approximately 2 per floor

3. Spatial Relationship Descriptions

Rooms are linearly arranged along a corridor, each with a private bathroom. Shared living and dining areas are centrally located to encourage resident interaction. Service and medical spaces are integrated into each floor for operational efficiency and rapid care delivery.

4. Overall Spatial Impression

The residential floors maintain a balance between privacy and communal engagement, combining routine care infrastructure with dignified domestic environments.
