

Building Level Breakdown and Analysis

Total Levels: 3

(Including: Basement Level, Ground Level, First Floor)

Level -1 Basement Level

Vocabulary Extraction

Technical rooms

Storage rooms

Service areas

Quantity Estimation

Technical rooms approximately 2

Storage rooms approximately 2

Spatial Relationship Descriptions

Technical and storage rooms are grouped and placed for backend support.

They are vertically connected to service and public zones above.

Overall Spatial Impression

The basement serves primarily as an infrastructure layer, facilitating utilities and maintenance operations hidden from resident use.

Level 0 Ground Floor

Vocabulary Extraction

Entrance hall

Courtyard

Dining room

Public lounge

Terrace

Quantity Estimation

Dining rooms approximately 2

Public lounges approximately 3

Terraces approximately 2

Spatial Relationship Descriptions

The entrance leads directly into the courtyard, which acts as a spatial anchor.

Dining and lounge areas are arrayed around this courtyard to enhance communal interaction.

Overall Spatial Impression

This level is the social and communal heart of the building, fostering interaction through spatial openness and centralized amenities.

Level +1 Upper Floor (Resident Units)

Vocabulary Extraction

Resident units

Corridors

Stairwells

Elevators

Terraces

Quantity Estimation

Resident units approximately 46

Corridors 2

Stairwells approximately 2

Elevators 12

Terraces approximately 2

Spatial Relationship Descriptions

Residential units are symmetrically distributed along the corridors.

Vertical circulation elements (stairs and elevators) are strategically spaced for efficiency.

Terraces provide peripheral natural connections and views.

Overall Spatial Impression

The upper floor functions as a highly optimized living zone, balancing accessibility with privacy and integrating open-air amenities for improved quality of life.

Summary of Spatial Strategy

This project exhibits a layered spatial strategy that progresses from infrastructural support (basement) to vibrant social engagement (ground floor), culminating in personal privacy and comfort (upper level). The design embraces natural topography, social sustainability, and sensory

sensitivity especially suited for elderly care contexts.
