

CASE54 - Nursing Home by Atelier du Pont

P1 - Architectural Drawings

Vocabulary Extraction:

- Room units
- Corridors
- Stairwells
- Elevators
- Courtyard
- Terraces
- Restaurant
- Common areas
- Service areas

Quantity Estimation:

- Room units x approx. 10-12 per standard floor
- Corridors x 1 per floor
- Stairwells x 2 per floor
- Elevators x 2 per floor
- Courtyard x 1 (centralized)
- Terraces x multiple per floor
- Restaurant x 1 (ground level)
- Common areas x 1+ per floor
- Service areas x multiple per floor

Spatial Relationship Descriptions:

- Room units are arranged along double-loaded corridors.

- A central courtyard provides natural light and ventilation.
- Stairwells and elevators are located at the ends for efficient vertical circulation.
- Common areas and service spaces are distributed evenly across all levels.
- Outdoor terraces are positioned around the perimeter.

Overall Spatial Impression:

The building organizes modular room units around a central courtyard, allowing light and ventilation to penetrate the core. Circulation and service functions are distributed logically for user efficiency and convenience.

P2 - Photographs / Renderings

1. Design Vocabulary Extraction:

- Perforated metal screens
- Timber cladding
- Glass curtain wall
- Green terraces
- Sun-shading devices

2. Atmospheric Description:

The building exterior exhibits warmth and softness through the use of natural wood and textured metal.

3. Spatial Composition / Hierarchy:

The composition centers on axial circulation and layering from solid to void.

4. Design Intent Reading:

The design promotes natural integration through light, openness, and garden contact.

5. Contextual Relationship:

The project responds to its urban context with terraces and greenery that soften boundaries.

P3 - Detail / Constructive / Diagrammatic Readings

1. Design Vocabulary Extraction:

- Modular room units
- Structural grids
- Natural ventilation diagrams
- Solar path diagrams
- Programmatic zoning

2. Atmospheric Description:

Emphasis on daylight, air movement, and functional distribution.

3. Spatial Composition / Hierarchy:

Core-to-periphery zoning is used, with structural regularity.

4. Design Intent Reading:

Bioclimatic design strategies aimed at promoting comfort, adaptability, and spatial equity.

LEVEL ANALYSIS

Level 1

Vocabulary:

- Reception hall, Restaurant, Common lounges, Courtyard, Service areas

Quantity:

- Reception x1, Restaurant x1, Common lounges x2, Courtyard x1, Services xmultiple

Relationships:

Reception is near the entrance, courtyard centralized, service spaces peripheral.

Impression:

Ground level is for social and operational use, promoting hospitality and interaction.

Level 2-5

Vocabulary:

- Room units, Corridors, Lounges, Service areas, Terraces

Quantity:

- Rooms x10-12, Corridor x1, Lounge x1, Services xmultiple, Terraces xmultiple

Relationships:

Double-loaded corridors, centered lounges, peripheral terraces.

Impression:

Efficient, repetitive layout balancing privacy and social interaction.

Level 6

Vocabulary:

- Premium rooms, Private terraces, Lounge

Quantity:

- Premium units (few), Terraces x1 per unit, Lounge x1

Relationships:

Private terraces for each room, shared lounge centrally located.

Impression:

Top floor offers greater privacy, views, and spatial quality.
