

Building Level Determination

Number of Levels: 1

Based on architectural drawings and text data from the original case page, the building is confirmed to be a single-story structure. All core residential, therapeutic, and service programs are arranged on one floor. There is no evidence of a second floor in either the plan drawings or photographs, and the architectural section confirms a single-level horizontal layout.

LEVEL SUMMARY

Level 1

Vocabulary Extraction

- Central corridor
- Residential units
- Internal yards
- Nurses' stations
- Dining rooms
- Living rooms
- Lounge areas
- Day center
- Gym
- Occupational therapy room
- Physiotherapy room
- Swimming pool
- Hydrotherapy area

- Beauty and hairdressing area

Quantity Estimation

- Residential units 6
- Nurses' stations 6 (1 per unit)
- Dining rooms 6 (1 per unit)
- Living rooms 6 (1 per unit)
- Lounge areas 6 (1 per unit)
- Day center 1
- Gym 1
- Occupational therapy room 1
- Physiotherapy room 1
- Swimming pool 1
- Hydrotherapy area 1
- Beauty and hairdressing area 1

Spatial Relationship Descriptions

- A central east-west corridor divides the layout into northern and southern program zones.
- Residential units are located on the north side and are slightly rotated and spaced to form semi-private internal yards, enhancing daylight and ventilation.
- Each residential unit contains its own internal subspaces and is served by a dedicated nurses' station.
- All therapy and service functions (such as the gym and hydrotherapy) are grouped along the south side for accessibility and logical separation from private living quarters.
- Shared services are positioned at junctions or ends of corridors to optimize flow and functional adjacencies.

Overall Spatial Impression

The facility adopts a horizontally distributed single-story plan with a central corridor spine that clearly separates private residential zones from active treatment and service zones. Courtyards and material language promote familiarity, comfort, and easy orientation for elderly users.
