

LEVEL-BASED ARCHITECTURAL ELEMENT EXTRACTION & SPATIAL SYNTHESIS

Level 1

1. Vocabulary Extraction:

- Reception hall
- Restaurant
- Fitness room
- Swimming pool
- Common lounges

2. Quantity Estimation:

- Reception hall × 1
- Restaurant × 1
- Fitness room × 1
- Swimming pool × 1
- Common lounges × 2

3. Spatial Relationship Descriptions:

- Reception hall is positioned near the main entrance, acting as a central orientation and distribution node.
- Restaurant and fitness functions are clustered toward the southern wing, encouraging recreational flow.
- Common lounges are distributed to allow dispersed zones of informal interaction.

4. Overall Spatial Impression:

The ground floor operates as a multifunctional public and recreational base, structured to promote wellness and social connectivity through programmatic zoning.

Level 2

1. Vocabulary Extraction:

- Residential units
- Corridor
- Stairwells
- Balconies

2. Quantity Estimation:

- Residential units × approx. 10-15
- Corridors × 1
- Stairwells × 2
- Balconies × 10-15 (1 per unit)

3. Spatial Relationship Descriptions:

- Units are organized linearly along a central corridor.
- Stairwells placed at opposing ends support vertical circulation efficiency.
- Each unit integrates a private balcony for enhanced livability.

4. Overall Spatial Impression:

This floor supports compact residential programming with consistent access and outdoor integration, ensuring a rhythm of privacy and openness.

Level 3

1. Vocabulary Extraction:

- Residential units
- Corridor
- Stairwells
- Balconies

2. Quantity Estimation:

- Residential units × approx. 10-15
- Corridors × 1
- Stairwells × 2
- Balconies × 10-15

3. Spatial Relationship Descriptions:

- Identical spatial sequence to Level 2 with circulation mirrored.
- Balconies provide direct light and personal outdoor space.

4. Overall Spatial Impression:

Standardized residential floor plate focused on accessibility, repetition, and routine comfort for senior living.

Level 4

1. Vocabulary Extraction:

- Residential units
- Corridor
- Stairwells
- Balconies

2. Quantity Estimation:

- Residential units × approx. 10-15
- Corridors × 1
- Stairwells × 2
- Balconies × 10-15

3. Spatial Relationship Descriptions:

- Continuation of the linear residential module with consistent adjacency principles.
- Balconies reinforce outdoor connection across all upper floors.

4. Overall Spatial Impression:

Maintains predictable residential rhythm while optimizing daylight and ventilation strategies.

Level 5 (Setback Floor)

1. Vocabulary Extraction:

- Residential units
- Terraces

2. Quantity Estimation:

- Residential units × approx. 5-8
- Terraces × 5-8 (1 per unit)

3. Spatial Relationship Descriptions:

- Units are fewer and more spaced, offering greater privacy and expansive terraces.
- Terraces act as an extension of indoor space, blurring thresholds between inside and outside.

4. Overall Spatial Impression:

Setback level enhances exclusivity and comfort, creating a premium spatial experience with larger private outdoor areas.
