

Vocabulary Extraction (per level)

Level 1 (Ground Floor) - Public café - Divisible meeting room - Quiet room - Staff rooms Level 2
(Residential Floor 1) - Apartments - Community house - Shared kitchen - Public area Level 3
(Residential Floor 2) - Apartments - Community house - Shared kitchen - Public area Level 4
(Residential Floor 3) - Apartments - Community house - Shared kitchen - Public area Level 5 (Attic) -
Office (Nursing administration)

Quantity Estimation (approximate)

Level 1 - Public café × 1 - Meeting room × 1 (divisible) - Quiet room × 1 - Staff rooms × 4–6
(estimated) Level 2–4 (Each Residential Level) - Apartments × 5–6 per floor (inferred from 12 beds) -
Community house × 1 - Shared kitchen × 1 - Public area × 1 Level 5 - Office × 1 (nursing
administration)

Spatial Relationship Descriptions

- Ground floor spaces are grouped for accessibility and interaction. - Residential floors center around
shared kitchens and public spaces to form community clusters. - South-facing terraces/gardens offer
daylight access and openness. - Attic office is spatially separated for functional independence.

Overall Spatial Impressions (Design Strategy)

- Community-centered spatial model promotes social life. - Vertical programming separates public,
semi-private, and administrative uses. - Central kitchens and shared lounges enhance elderly
autonomy and interaction. - External terraces support natural engagement.

Validation Check: Vocabulary–Quantity Consistency

Vocabulary terms directly relate to architectural features or functions. Quantity estimates remain
conservative and evidence-based, with no unsupported assumptions.
