

Case Study: CASE8 - Elderly Care Campus / Areal Architecten

Level 1

1. Vocabulary Extraction

- Entrance lobby
- Reception area
- Dining room
- Kitchen
- Service zone
- Storage room
- Stairwell
- Elevator
- Courtyard
- Circulation corridor
- Shared social room

2. Quantity Estimation

- Entrance lobby × 1
- Reception area × 1
- Dining room × 1
- Kitchen × 1
- Service rooms × approx. 2
- Storage rooms × approx. 2
- Stairwells × 2
- Elevators × 2
- Courtyards × 2
- Shared social rooms × approx. 2

3. Spatial Relationship Descriptions

Case Study: CASE8 - Elderly Care Campus / Areal Architecten

- The entrance and reception form a transitional buffer between public street access and internal communal areas.
- The kitchen and dining room are directly connected, forming a centralized food service core.
- Stairwells and elevators are symmetrically placed near the circulation loops for vertical access.
- Two internal courtyards serve as focal points and provide daylight into adjacent shared and circulation spaces.

4. Overall Spatial Impression

- The ground floor is a public-facing and operational layer, with a strong emphasis on service, accessibility, and social integration through courtyards and communal nodes.

Level 2

1. Vocabulary Extraction

- Living units
- Circulation corridor
- Courtyard voids
- Stairwell
- Elevator
- Lounge/shared space
- Balcony
- Terrace

2. Quantity Estimation

- Living units × approx. 12
- Shared lounges × approx. 2
- Courtyard voids × 2 (extending from Level 1)
- Stairwells × 2
- Elevators × 2

Case Study: CASE8 - Elderly Care Campus / Areal Architecten

- Balconies/Terraces × approx. 2

3. Spatial Relationship Descriptions

- Living units are arranged linearly along the loop corridor, with views into courtyards and access to shared lounges.
- Shared lounges are located at turning points or nodes in the corridor, encouraging interaction.
- Stairwells and elevators connect vertically to Level 1 public spaces and Level 3 units.
- Balconies and terraces are positioned at façade edges, providing private outdoor extensions to selected units.

4. Overall Spatial Impression

- This floor emphasizes residential privacy and passive social engagement, with units organized for daylight access and proximity to quiet, semi-public lounges.

Level 3

1. Vocabulary Extraction

- Living units
- Circulation corridor
- Stairwell
- Elevator
- Shared sitting area
- Roof terrace

2. Quantity Estimation

- Living units × approx. 10
- Shared sitting areas × approx. 1
- Stairwells × 2
- Elevators × 2
- Roof terraces × 1

Case Study: CASE8 - Elderly Care Campus / Areal Architecten

3. Spatial Relationship Descriptions

- Similar to Level 2, living units continue around the circulation loop.
- The third level has fewer units, allowing space for roof terrace access.
- Shared sitting areas are placed near vertical circulation cores.
- Roof terrace provides outdoor access and panoramic views, accessible from communal circulation.

4. Overall Spatial Impression

- This upper level provides more openness and quiet, with fewer units, maximizing privacy and offering a therapeutic outdoor experience through roof terraces.

Conclusion

- This three-level facility employs a clear spatial logic centered around an internal loop corridor and courtyard system. It fosters community while maintaining privacy, and the vertical distribution reflects a decreasing gradient of publicness, from active and service-oriented ground level to more serene, residential upper levels.
