

CASE81 - Residential Care Home Andritz Analysis

ARCHITECTURAL LAYER BREAKDOWN (LEVELS)

Building Composition Summary:

- Total Floors: 2 above ground
- No basement, due to flood-prone location and technical soil conditions
- Layout: Four wings surrounding a central "village square"

Level 1

1. Vocabulary Extraction

- Village square
- Entrance vestibule
- Nurses' station
- Oratory
- Café
- Hairdresser
- Atrium
- Residential units
- Single rooms
- Common living area
- Wide loggias
- Zoned gardens

2. Quantity Estimation

- Residential units $\times 3$
- Single rooms $\times \sim 45$ (3 units $\times$ 15 residents)
- Common living areas $\times 3$
- Nurses' station $\times 1$
- Oratory $\times 1$
- Café $\times 1$
- Hairdresser $\times 1$

3. Spatial Relationship Descriptions

CASE81 - Residential Care Home Andritz Analysis

- Residential wings radiate from the central village square, reinforcing community interaction
- Each residential unit includes private rooms and a shared living zone
- Programmatic nodes (café, oratory, hairdresser) anchor the central square
- Nurses' station centrally located for efficient access to all units
- Outdoor zones (gardens) buffer the building from its natural edge

4. Overall Spatial Impression

The ground level emphasizes social collectivity and interaction, structured around a central square, with clustered residential units and support services ensuring ease of access and care efficiency.

Level 2

1. Vocabulary Extraction

- Residential units
- Single rooms
- Common living area
- Wide loggias
- Atria
- Tower galleries

2. Quantity Estimation

- Residential units × 4
- Single rooms × ~60 (4 units × 15 residents)
- Common living areas × 4
- Tower galleries × multiple (quantity not specified)
- Atria × several (exact count unspecified)

3. Spatial Relationship Descriptions

- Upper-level residential wings echo ground floor organization around atria
- Loggias and tower galleries provide visual and physical extension toward the outside
- Vertical voids (atria) connect both levels, enhancing spatial depth and light penetration

4. Overall Spatial Impression

CASE81 - Residential Care Home Andritz Analysis

The second floor builds upon the communal logic of the ground floor, enriching spatial porosity and daylight access through atria and open loggias, while maintaining a clear and distributed residential structure.

PHOTOGRAPHIC + RENDERED ELEMENTS ANALYSIS

1. Design Vocabulary Extraction

- Timber façade
- Large glazing
- Open atrium
- Wide loggias
- Tower galleries
- Zoned gardens

2. Atmospheric Description

A warm, natural atmosphere is achieved through timber materials and large window openings, creating bright, air-filled interiors with calm, grounded textures. Gardens and wood detailing amplify the home's residential softness.

3. Spatial Composition or Hierarchy

Space is hierarchically centered on the village square, with wings establishing a rhythmic extension. Vertical cuts (atria) and horizontal bands (loggias) layer the structure, supporting both orientation and social scale.

4. Design Intent Reading

The architecture fosters communal intimacy and autonomy through its courtyard layout and clear zoning. Design choices prioritize human-scale interaction, daylighting, and integration with the landscape.

5. Contextual Relationship

The care home interfaces gently with its surroundings-a green park site near a stream-by extending outdoor decks and gardens into the natural terrain, encouraging engagement between residents and the local ecology.

DIAGRAMMATIC AND DETAIL ANALYSIS (P3)

Diagrams and detail images were not included in the provided materials. Please provide P3 imagery if detailed reading is required.
