

CASE86 - Spatial and Design Analysis

LEVEL 1

Vocabulary Extraction

- Courtyard
- Entrance veranda
- Semi-outdoor gray space
- Elderly living units
- Multi-purpose room
- Public service hall
- Daycare area
- Office
- Kitchen and dining area
- Stairwell
- Planted drainage strip

Quantity Estimation

- Entrance veranda × 2
- Elderly living units × approx. 4
- Multi-purpose room × 1
- Public service hall × 1
- Offices × approx. 2
- Stairwell × 1

Spatial Relationship Descriptions

- The building is organized around a central courtyard, allowing for visual openness and cross-ventilation.
- Entrance verandas connect to semi-outdoor gray spaces, forming shaded transitional zones.
- Elderly living units are placed on the north wing, facing the courtyard for better light and ventilation.
- Multi-purpose and public service halls are located at the south wing, adjacent to main entrances for accessibility.
- The daycare and office zones lie on the east, bridging the north and south program zones.

CASE86 - Spatial and Design Analysis

Overall Spatial Impression

Level 1 emphasizes a socially interactive spatial layout anchored by the courtyard, with adjacency-driven functions that prioritize accessibility, comfort, and climatic responsiveness.

LEVEL 2

Vocabulary Extraction

- Office spaces
- Terrace
- Semi-outdoor balconies
- Rooftop garden
- Skylight tower
- External steel staircase

Quantity Estimation

- Offices × approx. 2
- Terrace × 1
- Semi-outdoor balconies × 3
- Rooftop garden × 1
- Skylight tower × 1
- External steel staircase × 1

Spatial Relationship Descriptions

- Offices are located in quieter areas on the upper level.
- The south-facing terrace connects visually with the sloping roof and below spaces.
- Balconies serve as small outdoor living extensions in three corners of the building.
- Rooftop garden crowns the structure, adding green open-air space.
- The skylight tower at the southwest improves natural lighting and airflow.
- A steel staircase connects exterior circulation between both levels.

CASE86 - Spatial and Design Analysis

Overall Spatial Impression

Level 2 promotes nature-integrated work and rest areas through terraces and garden elements, enhancing passive environmental design and social wellness.

Photographic and Rendering-Based Spatial Output

1. Design Vocabulary

- Overhanging eaves
- Semi-outdoor gray zones
- Courtyard
- Skylight tower
- Perforated brick wall
- External staircase
- Planted drainage channel

2. Atmosphere

The ambiance is warm, informal, and community-centered, marked by tactile surfaces, filtered daylight, and vernacular elements. The use of earth tones and greenery fosters tranquility and spatial comfort.

3. Spatial Composition and Hierarchy

Courtyard-centric organization establishes a radial hierarchy. The skylight tower acts as a vertical anchor, while covered walkways and eaves organize movement horizontally.

4. Design Intent

The architectural intent is to foster social integration, thermal comfort, and site contextuality through shared spaces, layered envelopes, and passive environmental control.

5. Contextual Relationship

The building harmonizes with the village fabric, using shaded outdoor spaces and greenery as buffers.

CASE86 - Spatial and Design Analysis

Multiple access points integrate with the rural road network.

Detail/Diagram-Based Spatial Output

1. Detail Elements

- Perforated brick walls allow light and air movement while maintaining privacy.
- Skylight tower introduces daylight deep into plan interiors.
- Green drainage channels act as ecological edges for water management and soft landscape continuity.

2. Diagram Logic

- Circulation diagrams reveal courtyard-based radial zoning.
- Functional diagrams clarify gradients of public to private space.

3. Conceptual Gestures

Design is rooted in local climate and communal values, interpreting traditional typologies (courtyard, veranda) through modern material and construction logic.
