

ARCHITECTURAL PREPROCESS OUTPUT

Project Overview

- Project Name: Gaspoltshofen Elderly Home
- Location: Gaspoltshofen, Austria
- Architect: Gärtner + Neururer
- Building Type: Residential Elderly Care Facility
- Total Levels: 3 (1 Ground Floor + 2 Upper Floors)

LEVEL-WISE ANALYSIS

Level 1 – Ground Floor

1. Vocabulary Extraction

- Entrance Hall
- Public Areas
- Service Zones
- Circulation Space
- Corridors
- Concrete Core

2. Quantity Estimation

- Entrance Hall × 1
- Public Areas × approx. 2–3
- Service Zones × approx. 2–3
- Circulation Spine × 1
- Corridors × multiple

3. Spatial Relationship Description

Public and service zones are organized around a central circulation spine. Corridors serve as connective

4. Overall Spatial Impression

The ground floor prioritizes logistical clarity and functional zoning. Circulation is centralized and efficient

Level 2 – First Upper Floor

1. Vocabulary Extraction

- Dwelling Units
- Living Lounges
- Nursing Service Nodes
- Corridors
- Prefabricated Wooden Elements

2. Quantity Estimation

- Dwelling Units × approx. 10–12
- Living Area × 1
- Nursing Service Zone × 1
- Corridors × multiple

3. Spatial Relationship Description

Residential rooms encircle shared lounges and nursing areas. Corridors weave between them, fostering

4. Overall Spatial Impression

This level merges care and domesticity—private units orbit around communal cores, enabling both auto

Level 3 – Second Upper Floor

1. Vocabulary Extraction

- Dwelling Units
- Living Lounges
- Nursing Service Nodes
- Corridors
- Prefabricated Wooden Elements

2. Quantity Estimation

- Dwelling Units × approx. 10–12
- Living Area × 1
- Nursing Service Zone × 1
- Corridors × multiple

3. Spatial Relationship Description

The spatial logic mirrors Level 2, emphasizing symmetry and repeatability. Private and shared spaces mirror the previous floor's strategy.

4. Overall Spatial Impression

Level 3 reiterates the previous floor's strategy, providing a scalable and repeatable care environment layout.

IMAGE-BASED DESIGN ANALYSIS (P2)

1. Design Vocabulary

- Wooden Shingle Facade
- Large Windows
- Concrete Structural Core
- Prefabricated Timber Modules
- Deep Overhangs

2. Atmospheric Description

The ambiance is serene and grounded—textured wood cladding and natural daylight create a domestic atmosphere.

3. Spatial Composition / Hierarchy

Volumes are shifted and staggered to break down mass. Rhythmic facade openings and aligned overhangs create a sense of lightness.

4. Design Intent Interpretation

Design emphasizes contextual integration and user-centered softness. Modulation in volumes softens the building's presence.

5. Contextual Integration

Building massing responds to adjacent urban fabric—its staggered sections reduce visual bulk and harmonize with the surrounding context.
