

CASE89 - Project Spatial and Design Analysis

Building Level Summary

Total Floors Identified: 1

(Confirmed by architectural description and plan content showing all key programs arranged horizontally with no vertical stacking.)

Level 1 - Vocabulary Extraction

- Units
- Co-units
- Back rooms (private bedrooms)
- Room-between-spaces (intermediate multifunctional spaces)
- Small living rooms
- Service desks
- Kitchens
- Bathrooms
- Administration building
- Dining area
- Promenade
- Alley
- Garden

Level 1 - Quantity Estimation

- Units × 5 (total blocks for elderly care and short stay)
- Co-units × approx. 3 per unit
- Back rooms × approx. 3-4 per co-unit
- Small living rooms × approx. 1 per co-unit
- Service desks × approx. 1 per 2 units
- Kitchens × approx. 1 per 2 units
- Bathrooms × approx. 1 per 2 units
- Dining area × 1
- Administration building × 1

CASE89 - Project Spatial and Design Analysis

- Gardens × multiple, integrated with paths
- Promenade / alley × continuous throughout site

Level 1 - Spatial Relationship Descriptions

- Co-units are clustered around a small living room, creating intimate shared cores.
- Each pair of units shares a service core including a service desk, kitchen, and bathroom-centralizing care functions.
- Back rooms are directly connected to multifunctional intermediate rooms, offering both privacy and interaction.
- All program clusters are arranged around open garden courtyards, with promenade paths stitching the clusters together.
- The administration building is centrally positioned for optimal operational accessibility.
- The dining facility is placed adjacent to the northern access road for logistical convenience.

Level 1 - Overall Spatial Impression

The spatial strategy centers around modular clustering to form a decentralized yet interconnected living environment. Emphasis is placed on shared micro-communities with balanced public-private spatial flow, enabling both care efficiency and social engagement.

Visual/Design Analysis Summary - Design Vocabulary Extraction

- Wooden structural framing
- Open-air corridors
- Large glazed openings
- Traditional Japanese residential motifs
- Garden-integrated architecture

Visual/Design Analysis Summary - Atmospheric Description

A soft and serene ambiance is achieved through warm wooden textures, generous daylighting, and low, human-scaled proportions. The blend of natural materials and open thresholds evokes a tranquil, homely environment.

CASE89 - Project Spatial and Design Analysis

Visual/Design Analysis Summary - Spatial Composition / Hierarchy

Spatial order is achieved through modular repetition of unit types, articulated around garden courtyards and axial pathways. Visual and physical layering promotes gradual transitions between zones of privacy and sociability.

Visual/Design Analysis Summary - Design Intent Reading

The design intentionally dissolves institutional character through the adoption of domestic-scaled, human-centric spatial clusters. Modularity supports flexibility and community identity, while the architectural language encourages dignity and autonomy for elderly residents.

Visual/Design Analysis Summary - Contextual Relationship

The complex opens itself to the surrounding community through porous boundaries and walkable paths, establishing a dialog with the neighborhood while maintaining a clear internal logic.
