

Architectural Case Report: CASE93

PROJECT OVERVIEW

Project: 127 Subsidized Dwellings, Barcelona

Architects: Bru Lacomba Setoain

Levels Identified: 9 floors (Level 1 to Level 9)

Building Type: Residential - Social Housing

Source: <https://www.archdaily.com/473498/127-subsidized-dwellings-in-barcelona-bru-lacomba-setoain>

LEVEL 1

1) Vocabulary Extraction

- Public facility spaces
- Interior passage
- Communal courtyard
- Residential units

2) Quantity Estimation

- Public facilities approx. 2-3
- Passageway 1
- Courtyard 1 (shared)
- Residential units approx. 4-6

3) Spatial Relationship Descriptions

- Public facilities are located near the street entrance, enabling neighborhood interaction.
- A main passage crosses the volume, linking the urban street to the communal courtyard inside.
- Residential units are tucked into the rear or flanks, ensuring privacy from the main access.

4) Overall Spatial Impression

Level 1 emphasizes permeability and public connectivity, acting as an interface between city and dwelling. The layout invites co

LEVELS 2–9

1) Vocabulary Extraction

- Central corridor
- Residential units
- Stairwells
- Balconies
- Corner multifunctional spaces

2) Quantity Estimation (per floor)

- Central corridor 1
- Residential units approx. 8-10
- Stairwells approx. 2
- Balconies 8-10 (one per unit)
- Corner multi-use areas approx. 4

3) Spatial Relationship Descriptions

- Units are aligned linearly on both sides of a central corridor.
- Stairwells are located strategically at ends or mid-points for vertical access.
- Balconies are oriented outward, some facing the street, others toward courtyards.

- Corners contain expanded or special-use spaces enhancing spatial diversity.

4) Overall Spatial Impression

Upper floors follow a rational modular system centered around efficiency, symmetry, and natural ventilation. Social interaction is

DESIGN + ATMOSPHERIC ANALYSIS

1. Design Vocabulary

- Perforated metal screens
- Louvers
- Projecting balconies
- Concrete facades
- Glass panels

2. Atmospheric Description

The composition conveys a sense of robust simplicity through its concrete shell, softened by metal filtering layers. The play of li

3. Spatial Composition or Hierarchy

A clear visual order is established through the repetition of balcony bays and facade apertures. Horizontal banding and vertical

4. Design Intent Interpretation

The intention appears to embrace openness and permeability, promoting resident-city connection. Material transparency and la

5. Contextual Integration

The building anchors a revitalized plaza and opens pedestrian routes through its volume, enhancing urban porosity in Barcelona

FLOOR COUNT VERIFICATION

Confirmed Floor Count: 9 Levels (Ground + 8 upper floors)

- Verified through elevations and photographs visible in source material.
- Distinct floor lines and repeating modular units were counted across facade images.
- The 9-level division includes ground-level community interface and upper housing.
